Employees

- ▶ > 1,500 in adesso Group

Sales revenues

- ▶ Expected :
192 – 198 million €

References

- ▶ Motivation:
 - > ‚What does your mobile know‘?
 - > Mobile phone collects a lot of personal information
 - Supplying information to the user
- ▶ Naming:
 - > **Information:** app will collect information
 - > **Forming:** collected data will be formed and interpreted
 - > **Informing:** app will inform the user what information was won

- ▶ Sources of information:
 - > GPS-coordinates
 - > Address book
 - > Photos
 - > Internet
- ▶ Scenarios:
 - > Detecting most important places
 - > Analyzing personal behavior
 - > Analyzing photos
 - > Analyzing address book
- ▶ Team might create additional creative ideas during the project

Detecting most important places

Detecting important places:

- ▶ User lives in a big city
- ▶ Works 15 km away and uses public transportation
- App recognizes home and office
- Assume home / office from time of day
- Additional check of addresses against known business entries

Analyzing personal behavior:

- ▶ User goes 3 times a week to the gym
- ▶ 5 km away and usage of bike
- App recognizes the place is gym
- Conjunction between the duration and the location
- Analyzing the speed to find out that a bike was used

Analyzing address book and photos:

- ▶ User travels with friends and makes photos
- ▶ User has a well-maintained address book of friends and relatives worldwide
- App extracts the time and location information from the pictures
- Face detection with check against the contact list

- ▶ App learns from recurring situations
- ▶ After learning period: app should be able to tell where the person lives and works
- ▶ Extract information from pictures with Geo-Coordinates → add this information to a personal movement profile
- ▶ Use information from all available sensors to gather additional information
- ▶ Provide the gathered information and the derived assumptions to the user

- ▶ User Interface:
 - > Collector: gathers information and should be more or less invisible to the user
 - > Reporting: Display of the information and intuitive digging into details
- ▶ Performance
- ▶ Data Integrity
- ▶ Backup functionality for the collected data and reports
